

Product Segmentation & Performance Analysis Report

Data Source: gold.report_product **Report Date:** May 28, 2026

Executive Summary

This report presents a comprehensive analysis of product performance across sales, demand, lifecycle, and segment classification. The product catalog spans three primary categories — **Bikes, Accessories, and Clothing** — and two performance segments: **High Performer** and **Mid-Range**. Total recorded revenue across High Performer products alone reaches **\$27,226,682**, against **\$2,124,576** for Mid-Range products — a gap of more than 12x. Despite this, mid-range products attract **twice as many customers** and move more than **twice the unit volume**. These divergent dynamics shape a dual-strategy imperative: protect and grow the high-value bike portfolio while expanding the reach and efficiency of the high-volume accessories and clothing lines.

1. Product Sales Performance

1.1 Highest Revenue-Generating Products

Rank	Product Name	Category	Subcategory	Total Sales
1	Road-150 Red, 48	Bikes	Road Bikes	\$1,205,786
2	Road-150 Red, 62	Bikes	Road Bikes	\$1,202,208
3	Road-150 Red, 52	Bikes	Road Bikes	\$1,080,556
4	Road-150 Red, 56	Bikes	Road Bikes	\$1,055,510
5	Road-150 Red, 44	Bikes	Road Bikes	\$1,005,418
6	Mountain-200 Black, 42	Bikes	Mountain Bikes	\$979,965
7	Mountain-200 Silver, 38	Bikes	Mountain Bikes	\$979,040
8	Mountain-200 Black, 46	Bikes	Mountain Bikes	\$961,605
9	Mountain-200 Black, 38	Bikes	Mountain Bikes	\$952,425
10	Mountain-200 Silver, 46	Bikes	Mountain Bikes	\$928,000

The top 10 revenue-generating products are exclusively bikes. The **Road-150 Red** series dominates the top five, with the 48 cm frame leading at **\$1,205,786**. The **Mountain-200** series commands positions 6 through 10, collectively generating **\$4,800,035** – indicating that while road bikes hold the top individual spots, mountain bikes represent a powerful and consistent revenue tier just below. The top 10 products alone account for approximately **\$10,370,513** in combined revenue, reflecting the extreme concentration of value in a small number of premium SKUs.

1.2 Highest Quantity Sold

Rank	Product Name	Category	Subcategory	Quantity Sold
1	Water Bottle - 30 oz.	Accessories	Bottles and Cages	4,249
2	Patch Kit/8 Patches	Accessories	Tires and Tubes	3,189
3	Mountain Tire Tube	Accessories	Tires and Tubes	3,093
4	Road Tire Tube	Accessories	Tires and Tubes	2,375
5	Sport-100 Helmet, Red	Accessories	Helmets	2,230
6	AWC Logo Cap	Clothing	Caps	2,190
7	Sport-100 Helmet, Blue	Accessories	Helmets	2,125
8	Fender Set - Mountain	Accessories	Fenders	2,121
9	Sport-100 Helmet, Black	Accessories	Helmets	2,085
10	Mountain Bottle Cage	Accessories	Bottles and Cages	2,034

A complete reversal from the revenue list: all top 10 volume products are accessories or clothing, with **zero bikes** appearing. The **Water Bottle (30 oz.)** leads at **4,249 units**, nearly 1,000 units ahead of second place. The tyres and tubes subcategory appears three times in the top four — reinforcing its role as the highest-demand consumable line. The Sport-100 Helmet appears in three colourways (red, blue, black), collectively selling **6,440 units**, making it the most purchased individual product line in the catalogue.

1.3 Orders vs. Quantity — Alignment Check

Product Name	Total Orders	Quantity Sold	Ratio
Water Bottle – 30 oz.	4,244	4,249	~1.00
Patch Kit/8 Patches	3,189	3,189	1.00
Mountain Tire Tube	3,092	3,093	~1.00
Road Tire Tube	2,375	2,375	1.00
Mountain Bottle Cage	2,025	2,034	~1.00

Across the top 10 most-ordered products, total orders and quantity sold are nearly identical — a ratio very close to **1:1** in every case. This indicates that customers typically purchase these products one unit per order, which is characteristic of consumable accessories and replacement parts. There are no bulk-purchasing patterns distorting the volume numbers.

1.4 Highest Average Order Revenue

Rank	Product Name	Category	Subcategory	Avg. Order Revenue
1-5	Road-150 Red (all sizes)	Bikes	Road Bikes	\$3,578
6-9	Mountain-100 Silver (all sizes)	Bikes	Mountain Bikes	\$3,400
10	Mountain-100 Black, 42	Bikes	Mountain Bikes	\$3,375

The entire top 10 for average order revenue is dominated by bikes. The **Road-150 Red** series commands a consistent **\$3,578 per order** regardless of frame size, while the **Mountain-100 Silver** series averages **\$3,400**. This pricing consistency across sizes reflects a fixed list price strategy rather than size-based pricing tiers — a signal that margin management in the Bikes category is driven by product line rather than configuration.

1.5 Highest Monthly Revenue by Product

Rank	Product Name	Category	Avg. Monthly Revenue
1	Road-150 Red, 48	Road Bikes	\$100,482
2	Road-150 Red, 62	Road Bikes	\$100,184
3	Road-150 Red, 52	Road Bikes	\$90,046
4	Road-150 Red, 56	Road Bikes	\$87,959
5	Road-150 Red, 44	Road Bikes	\$83,784
6	Mountain-200 Black, 42	Mountain Bikes	\$81,663
7	Mountain-200 Silver, 38	Mountain Bikes	\$81,586
8	Mountain-200 Black, 46	Mountain Bikes	\$80,133
9	Mountain-200 Black, 38	Mountain Bikes	\$79,368
10	Mountain-200 Silver, 46	Mountain Bikes	\$77,333

The **Road-150 Red, 48** generates the highest monthly revenue at **\$100,482**, effectively crossing the six-figure monthly mark. The top two Road-150 variants both exceed **\$100K/month**, while Mountain-200 variants consistently produce **\$77K-\$82K/month**. These monthly revenue rates make the bike category the engine of the business's recurring financial performance and underscore the importance of maintaining consistent inventory and availability for these SKUs.

2. Product Category Analysis

2.1 Category Revenue Contribution

The Bikes category — specifically Road Bikes and Mountain Bikes — dominates the revenue rankings absolutely. Every entry in the top 10 revenue list belongs to the Bikes category. Road

Bikes lead individual SKU performance, while Mountain Bikes provide the second tier of high-value revenue.

2.2 Subcategory Demand – Units Sold

Rank	Subcategory	Quantity Sold
1	Tires and Tubes	17,323
2	Road Bikes	8,068
3	Bottles and Cages	7,994
4	Helmets	6,440
5	Mountain Bikes	4,968
6	Jerseys	3,334
7	Caps	2,190
8	Touring Bikes	2,167
9	Fenders	2,121
10	Gloves	1,429

Tires and Tubes is the undisputed demand leader with **17,323 units sold** – more than twice the volume of Road Bikes in second place. This subcategory functions as a high-frequency consumable, repurchased regularly by existing customers. Bottles and Cages rank third at **7,994 units**, closely shadowing Road Bikes. The top three subcategories by volume (tyres and tubes, road bikes, bottles and cages) collectively account for **33,385 units**, representing the core of the business's physical throughput.

2.3 Average Selling Price by Category

Category	Avg. Selling Price
Bikes	\$1,542
Clothing	\$45
Accessories	\$32

The pricing stratification across categories is dramatic. Bikes average **\$1,542 per unit – 34x more than Clothing (\$45)** and **48x more than Accessories (\$32)**. This confirms that bikes are a fundamentally different commercial proposition from the rest of the catalogue, generating revenue through high unit economics rather than volume. Accessories and Clothing operate on thin per-unit economics but compensate with transaction frequency and broad customer reach.

2.4 Customer Reach by Category

The Accessories category attracts the highest number of customers at **34,850** – the broadest reach of any category in the catalogue. This positions accessories as the primary customer acquisition and retention tool, serving as the entry point for the widest portion of the customer base. It also creates significant cross-sell potential: customers entering through Accessories represent an addressable audience for upselling into higher-margin Clothing and, ultimately, Bikes.

2.5 Underperforming Subcategories

All non-Bike subcategories fall below the category average sales threshold of **\$1,726,544**, and are classified as underperforming. The key figures:

Subcategory	Total Sales	Average Sales
Tires and Tubes	\$244,445	-\$1,482,099
Helmets	\$225,400	-\$1,501,144
Jerseys	\$173,084	-\$1,553,460
Shorts	\$71,330	-\$1,655,214
Bottles and Cages	\$56,984	-\$1,669,560
Hydration Packs	\$40,315	-\$1,686,229
Bike Stands	\$39,591	-\$1,686,953
Bike Racks	\$39,240	-\$1,687,304
Vests	\$36,160	-\$1,690,384
Gloves	\$34,296	-\$1,692,248
Fenders	\$46,662	-\$1,679,882
Caps	\$19,710	-\$1,706,834
Cleaners	\$7,272	-\$1,719,272
Socks	\$5,112	-\$1,721,432

It is important to note that the benchmark average of \$1,726,544 is heavily skewed by the Bikes category. The underperformance classification reflects a revenue gap relative to Bikes, not absolute commercial failure. **Tires and Tubes (\$244,445)** and **Helmets (\$225,400)** are the strongest performers within the underperforming group and generate meaningful revenue in absolute terms. **Socks (\$5,112)** and **Cleaners (\$7,272)** are the weakest subcategories and may be candidates for portfolio rationalization.

3. Product Lifecycle & Demand

3.1 Products Not Sold Recently

A significant number of products have recency values of **148-173 months** — meaning they have not recorded a sale in over **12 years** in some cases. The most inactive products include:

Products with **173-month recency** (longest inactive period): Mountain-100 Black 42, Road-650 Red 62, Mountain-100 Black 48, Road-650 Red 44, Road-650 Black 48, Road-650 Red 48, Road-150 Red 44, Road-150 Red 62, and multiple other Road and Mountain Bike variants — all exclusively from the Bikes category.

Products with **148-month recency**: A broad set of Accessories and Clothing items including Water Bottle 30 oz., Patch Kit/8 Patches, Sport-100 Helmets, AWC Logo Cap, Mountain Tire Tube, and others. These products appear paradoxically — they are among the highest-volume sellers yet also appear in the recency list, suggesting the recency metric may be measured from a historical dataset reference point rather than reflecting current inactivity.

3.2 Longest Sales Lifespan Products

Product Name	Category	Lifespan (Months)
Long-Sleeve Logo Jersey, M	Clothing	13
Road Bottle Cage	Accessories	13
Classic Vest, S	Clothing	13
Touring Tire	Accessories	13
Sport-100 Helmet, Red	Accessories	13
AWC Logo Cap	Clothing	13
Water Bottle - 30 oz.	Accessories	13
Patch Kit/8 Patches	Accessories	13
All-Purpose Bike Stand	Accessories	13
Half-Finger Gloves (all sizes)	Clothing	13

30 products share the maximum lifespan of 13 months — all from the Accessories and Clothing categories. None of the top-revenue Bike products achieve this lifespan ceiling, with most Bike variants reaching **11-12 months**. This reveals a structural lifecycle difference: Accessories and clothing sustain commercial relevance longer, likely due to lower price sensitivity and more frequent repurchase cycles. Bikes, while higher in per-unit value, cycle through their commercial life more quickly.

3.3 Products Near End of Lifecycle

Products classified as approaching end-of-life combine short remaining lifespans (9-12 months) with high recency values (149-173 months). Two product segment types appear in this list:

Mid-range bikes at end-of-life include Road-650 Black 48 (lifespan 9 months, recency 173 months), Road-650 Black 60, Road-650 Red 58, and multiple Road-650 and Mountain-500 variants — all with lifespans of 9-11 months and recency of 149-173 months.

High performer bikes near lifecycle end include Mountain-100 Silver 48, Mountain-100 Silver 42, and Mountain-100 Black 38 (all with 11-month lifespan and 173-month recency), as well as the Road-150 Red series (12-month lifespan, 173-month recency) — notable given these are the top revenue products.

The presence of **high performer products in the end-of-lifecycle list** is a critical planning signal. If flagship SKUs like the Road-150 Red and Mountain-200 series are approaching product maturity, refreshed or next-generation versions must be in the pipeline to maintain the \$77K-\$100K monthly revenue they currently contribute.

3.4 Products with Stable Long-Term Demand

Product Name	Segment	Category	Lifespan	Recency
Long-Sleeve Logo Jersey, M	Mid-Range	Clothing	13	148
Road Bottle Cage	Mid-Range	Accessories	13	148
Road Tire Tube	Mid-Range	Accessories	13	148
Long-Sleeve Logo Jersey, L	Mid-Range	Clothing	13	148
Touring Tire Tube	Mid-Range	Accessories	13	148
ML Road Tire	Mid-Range	Accessories	13	148
Sport-100 Helmet, Black	High Performer	Accessories	13	148
Half-Finger Gloves, S	Mid-Range	Clothing	13	148
Sport-100 Helmet, Red	High Performer	Accessories	13	148
AWC Logo Cap	Mid-Range	Clothing	13	148

Ten products demonstrate the maximum lifespan of **13 months** combined with consistent recency – the hallmarks of stable, dependable demand. **8 of the 10 are mid-range products**, while the **Sport-100 Helmet (Black and Red)** is the only high-performance product achieving this stability. These products form the backbone of the accessories and clothing revenue base and should be given priority in inventory planning, promotional calendars, and stockout prevention.

4. Product Segment Analysis

4.1 Revenue Comparison: High Performer vs. Mid-Range

Segment	Product Count	Total Sales	Avg. Sales per Product
High Performer	75	\$27,226,682	\$363,022
Mid-Range	83	\$2,124,576	\$25,597

The revenue gap between segments is staggering. **High Performer products generate \$363,022 on average per product** – more than **14x the Mid-Range average of \$25,597**. Despite having 8 fewer products (75 vs. 83), High Performers produce **92.8% of total revenue** (\$27.2M of \$29.4M combined). Mid-Range products, while more numerous, contribute just **7.2%** of total revenue. This extreme concentration means that any disruption to the High Performer portfolio – stockouts, lifecycle decline, competitive pressure – poses a disproportionate revenue risk.

4.2 Quantity Sold by Segment

Segment	Total Quantity Sold
Mid-Range	40,632
High Performer	19,772

By volume, the relationship inverts completely. **Mid-Range products move 40,632 units** – more than **double the 19,772 units** sold by High Performers. This confirms the dual-nature of the product portfolio: High Performers drive value, Mid-Range products drive volume. The two segments serve fundamentally different commercial purposes and should be managed under separate KPI frameworks.

4.3 Average Monthly Revenue by Segment

Segment	Avg. Monthly Revenue
High Performer	\$30,766
Mid-Range	\$2,192

On a monthly basis, high performer products generate **\$30,766** on average — **14x more than mid-range products at \$2,192/month**. This confirms that the monthly revenue advantage is structural and consistent, not driven by one-off spikes.

4.4 Customer Reach by Segment

Segment	Total Customers
Mid-Range	39,484
High Performer	19,549

Mid-Range products attract **39,484 customers** — more than **double the 19,549** reached by High Performers. This is the clearest evidence that mid-range products serve as the customer acquisition layer of the portfolio, onboarding and retaining a broad base of buyers who may never purchase a premium bike but whose cumulative spend and loyalty still contribute meaningfully to the business.

4.5 Revenue Consistency by Segment

Segment	Avg. Monthly Revenue	Monthly Revenue Variation
High Performer	\$30,766	\$24,877
Mid-Range	\$2,192	\$1,077

High Performer products generate significantly more revenue per month but come with **considerably higher variability** — a standard deviation of **\$24,877** against an average of **\$30,766** (a coefficient of variation of ~81%). Mid-range products, by contrast, have a variation of just **\$1,077** against a **\$2,192** average (~49% CV), making them roughly **40% more consistent** relative to their revenue base. This has important implications for financial forecasting: the business's revenue is both large and volatile, driven by high-value but unpredictable bike sales, while the stable floor is provided by the lower-revenue mid-range segment.

5. Strategic Recommendations

Protect the High Performer Bike portfolio with urgency. With 75 High Performer products generating **\$27.2M** and key SKUs like Road-150 Red and Mountain-200 approaching lifecycle maturity, the single most critical action is ensuring successor products are in development or

ready for launch. A six-month gap in flagship bike availability could cost **\$450K–\$600K** in monthly revenue.

Position mid-range products as the customer acquisition engine. With **39,484** customers reached — double the High Performer audience — Mid-Range Accessories and Clothing are the front door to the brand. Investing in these products' availability, variety, and marketing reach serves not just direct revenue, but pipeline generation for higher-ticket Bike purchases.

Rationalise the weakest subcategories. Socks (\$5,112), cleaners (\$7,272), and caps (\$19,710) generate negligible revenue relative to the complexity they add to inventory management. A cost-benefit review of whether these subcategories are contributing to cross-selling, basket size, or customer satisfaction — or simply consuming operational resources — is warranted.

Leverage the Sport-100 Helmet series as a bridge product. With **6,440** units sold across three colourways and classification as a high performer with stable long-term demand, the Sport-100 helmet is uniquely positioned: it sells like a mid-range product (high volume, broad reach) but carries high performer classification. Increasing promotional weight behind this product could drive both segment visibility and revenue density in the Accessories category.

Build revenue smoothing mechanisms for High Performers. A monthly revenue variation of **\$24,877** on a **\$30,766** average indicates boom-and-bust selling patterns in the Bike segment — likely driven by seasonality or campaign-dependent purchasing. Subscription offers, pre-order programs, or financing options for premium Bikes could reduce variance while protecting total revenue.

Target the Tires and Tubes repurchase cycle. As the highest-volume subcategory at **17,323 units** sold, Tires and Tubes is a predictable, high-frequency repurchase category. A loyalty or auto-replenishment program targeting existing Tire and Tube buyers could increase retention, reduce churn, and provide a stable recurring revenue stream with minimal acquisition cost.

Conclusion

The product portfolio presents a tale of two commercial models operating in parallel. High Performer products — predominantly Bikes — generate exceptional per-unit value (**\$363K** average revenue per product, **\$3,375–\$3,578** average order value) but serve a smaller customer base and carry meaningful lifecycle and variability risk. Mid-Range products — Accessories and Clothing — generate modest per-unit revenue but sustain broad customer engagement (**39,484 customers**), high transaction volume (**40,632 units**), and greater month-to-month consistency. A healthy business outcome requires both segments to function effectively: High Performers to deliver revenue mass, Mid-Range to deliver customer breadth and stability. The most pressing near-term priority is managing the lifecycle transition of the flagship Bike SKUs before their commercial maturity creates a revenue gap that Mid-Range volume cannot compensate for.
